

# DISCLOSURE REGARDING PROGRAM PREPARATION FOR PROFESSIONAL LICENSURE OR CERTIFICATION

---

<b>COLLEGE</b>	<b>College of Engineering and Computer Science</b>
<b>PROGRAM</b>	<b>Industrial Engineering, BS</b>

The University of Central Florida is committed to providing clear and accurate information to current and prospective students to help inform career planning. The UCF program identified above prepares students for state-regulated professional licensure or certification. However, specific licensure and certification requirements may vary by state or territory. Requirements typically include earning a degree or other educational credential from an institution and program that meet certain requirements in that state (e.g., specific coursework, accredited status); passing a state or national exam; and/or working in the field for a period of time or completing a certain number of clinical hours. If your career plans include pursuing professional licensure or certification, it is important to become educated on the credentialing requirements of the state in which you intend to practice.

Effective July 1, 2024, federal regulation requires the university to meet all educational requirements for state-regulated licensure or certification in every US state and territory where its eligible programs are offered. This disclosure is intended to provide you with information regarding the educational preparation you will receive in your chosen program of study<sup>i</sup>.

## **UCF Program Preparation in the State of Florida**

The Industrial Engineering (BS) is designed for in-person course delivery. Although some limited online options may be available, students must take a preponderance of their coursework in the major in-person within the State of Florida.

This program meets the educational requirements for licensure as a professional engineer in the State of Florida. However, the program does not lead directly to licensure upon graduation. For information on all requirements for this credential<sup>ii</sup>, please review the Florida Board of Professional Engineers licensure requirements available here: <https://fbpe.org/licensure/licensure-process/>.

## **UCF Program Preparation in Other US States and Territories<sup>iii</sup>**

As a participant in the State Authorization Reciprocity Agreements (SARA), UCF is authorized to offer educational programs in all states (except California), the District of Columbia, Puerto Rico, and the US Virgin Islands. The State of California is not currently a member of SARA, but UCF is separately authorized to offer educational programming there as well.

We are currently unable to determine whether or not the Industrial Engineering (BS) program meets the educational requirements for graduates to be eligible to apply for licensure or certification in any additional states.

If you are interested in seeking licensure outside of the State of Florida, we encourage you to review the appropriate state licensing board information to determine all requirements needed to obtain your credential of interest. State licensing board contact information for this field can be found here: <https://apq.ucf.edu/document/statelicensingboards-eng/>. You are also welcome to reach out to the UCF program contact identified below with questions in this regard, and we will do our best to assist you in your career planning.

### **Enrollment Eligibility Restrictions<sup>iv</sup>**

To comply with federal enrollment restrictions, UCF may only enroll students physically located in the states and territories where it meets all educational requirements for the credential it prepares students to achieve. Accordingly, we are generally unable to enroll students physically located in other states and territories during their first term of enrollment in the major unless they intend to pursue licensure in a state or territory where UCF does meet educational eligibility requirements and submit a written attestation to this effect. Otherwise, students physically located in an ineligible state during their first term of enrollment must select a major that is free from out-of-state enrollment restrictions. Please reach out to the program contact listed below for additional guidance in this regard.

### **Programmatic Accreditation<sup>v</sup>**

This program is accredited by the Engineering Accreditation Commission of ABET, <https://www.abet.org>. Programmatic accreditation is typically required for state-regulated licensure in this field. Recognition by ABET EAC is specific to the program and is distinct from [UCF's institutional accreditation](#) that is required for other purposes, including UCF's authorization to award federal financial aid to students.

### **UCF Program Preparation Outside the United States**

This disclosure does not address program eligibility in countries outside the United States. We are unable to determine whether or not the Industrial Engineering (BS) program meets the educational requirements for graduates to be eligible to apply for licensure or certification outside the United States. It is important to become educated on the credentialing requirements in the location in which you intend to practice.
